Frontend Developer

Osijek, Croatia

EXPERIENCE

Norwegian Tutor and Proofreader

Freelance
SEP 2018 - Present

Norwegian Teacher

Herzen State Pedagogical University +
Various Language Schools
SEP 2014 - AUG 2018

EDUCATION

Saint Petersburg State University

Bachelor's, Scandinavian Languages, Literatures,
and Linguistics
SEP 2011 - JUN 2015

LICENCES & CERTIFICATIONS

Angular - The Complete Guide

Academind, April 2023
Certificate ID: cert_jw09vrxb

NextJS 14 & React - The Complete Guide

Academind, June 2023
Certificate ID: cert_p5k6g6bv

Understanding TypeScript

Academind, July 2023
Certificate ID: cert_wj5qh9

JavaScript Algorithms - The Fundamentals

Academind, October 2023
Certificate ID: cert_vb84ydpX

HTMX - The Practical Guide

Academind, June 2024
Certificate ID: cert_j7qly6sh

React - The Complete Guide

Academind, May 2023
Certificate ID: cert_911qx973

CSS - The Complete Guide 2022 (incl. Flexbox, Grid & Sass)

Academind, July 2023
Certificate ID: cert_7r731lz8

SQL - The Complete Guide (MySQL, PostgreSQL & more)

Academind, July 2023
Certificate ID: cert_439kpkj3

JavaScript - The Tricky Parts

Academind, January 2024
Certificate ID: cert_t8q6wym9

PROJECTS

Udruga Ahimsa website

[repository](#)

An informational website for a youth non-profit organisation based in Zadar, Croatia.

TypeScript + React

- Sanity
- nodemailer
- reCAPTCHA

Next.js app router
CSS

Integrates with **Sanity CMS**, so that the website owner can manage all the content with ease.

Deployed to cPanel as a standalone Next.js app to be as light-weight as possible.

Forms are **reCAPTCHA**-protected. When submitted, the data is extracted to **compile** and **send** a confirmation **email** to the sender and a notification email to the website owner.

Centrabit website

private repo, code
can be shown on
demand

An informational website for a crypto start-up and a place to subscribe to their desktop app.

TypeScript + React

- react-markdown
- nodemailer
- reCAPTCHA
- Paddle.js

Next.js pages router
MongoDB
SCSS

Pages are **rendered from .md files**, using **incremented static regeneration** - no need to rebuild the website when the content is updated.

Webshop functionalities are implemented using **Paddle's APIs**.

The forms are protected with **reCAPTCHA**.

The backend **stores form data in a MongoDB database** and **sends emails**: a confirmation letter to the user and a notification letter to the site administrator

SolidGames website

private repo, code
can be shown on
demand

A multipurpose platform for a gaming community with 3000+ registered members.

JavaScript

- cropper.js
- reCAPTCHA
- Leaflet.js
- prism
- bitjson/qr-code

CSS
HTML

The website features:

- forum
- real time **messaging system**
- complex form for uploading user-made mission files
- .pbo file parser used to extract Arma 3 mission data to autocomplete the mission upload form
- custom-made **BBCode tag panel**
- **admin panel** for user and content management
- in-browser match **replay viewer**

I worked on the front end, implementing the given design and connecting the client side to the backend written in C++.

I had the most fun developing [the match replay viewer](#). This utility:

- gets a JSON file of player positions and in-game events
- renders the match in the browser on a map in a sort of video player UI
- allows to rewind to events from the log
- allows pinpoint players from the players list
- aggregates and shows the match stats for every player and squad

Cookbook / Shopping List app

[repository](#)

A web app for sharing recipes and keeping grocery lists.

TypeScript + React <ul style="list-style-type: none"> - Redux Toolkit - JSON Web Token - Framer Motion - imgbb API Next.js app router RESTful API MongoDB CSS + Tailwind.CSS	<p>Registration and authentication are implemented without any third-party libraries other than JWT.</p> <p>Database data is cached both on server and client, so the number of DB calls is reduced.</p> <p>Images users attach to their recipe forms are uploaded to imgbb image hosting when the recipe is added to the database.</p> <p>Ingredients of any given recipe can be added to the user's grocery list in just one click. Items with the same name and measure units add up automatically.</p>
--	---

Birthday Zadar Quest Walk repository	
A birthday present for a friend who is new to Zadar and enjoys city quests.	
TypeScript Angular SCSS	<p>A simple question-and-answer single page application.</p> <p>Keeps the current question number in the local storage so you don't have to start the quest from the beginning if you close the app.</p>

Portfolio repository	
A page to keep my projects in one place.	
TypeScript React Gatsby GraphQL CSS	<p>Flashy and gaudy because I wanted to practise making fancy borders and animated gradients.</p> <p>Made with Gatsby so that I can test out a framework that is new to me.</p>
